

PRESS RELEASE

IMMEDIATE RELEASE

IXTROM Group will participate at CANSEC on May 31st 2017

IXTROM will unveil its newest innovation in Canada, a large-scale integrated C⁴ISR system specifically designed for Defence and Security purposes.

Magog, May 9th, 2017 – IXTROM Group, developers of advanced software solutions for global management, situational awareness, and command and control intelligence, will unveil their latest innovation, the **IXM²C²**, at the upcoming CANSEC trade show in Ottawa, Canada.

IXTROM will be presenting the **IXM²C² (Intelligence Management, Command, Control and Dynamic Collaboration System)**, a large-scale integrated C⁴ISR system that is specifically designed for Defence and Security purposes. IXTROM's all-encompassing **IXM²C²** technology enhances every stage of operations giving users a turnkey solution to meet mission needs from beginning to end. The innovation is a multi-disciplinary system empowering commanders with real time situational awareness, comprehensive resource management and a unique all-in-one strategic, operational and tactical system to support the implementation and compliance of Standard Operating Protocols, Tactics, Techniques, and Procedures (TTPs).

The system ensures that commanders and their staff are equipped with a state-of-the-art solution to leverage command and control operations before, during and after an event strikes. The innovative solution provides real time operational management to control any type of incident, whether be a real incident or during the modeling and simulation process. Preparedness, response and recovery phases are totally covered with a vast array of integrated services to support all types of missions from a secure and centralized platform (Operational, Joint, Coalition or Unified). IXTROM solutions interoperate seamlessly fostering collaborative defence as they connect a spectrum of services within existing IT infrastructures. The state-of-the-art technology is flexible, scalable and secure providing a high ROI and a true operational edge to all commanders.

"We understand that having the highest and most efficient form of interoperability between Defence and Security organizations is vital to effective and accurate response to an event among different entities. The new **IXM²C²** technology allows personnel to interoperate from different locations, organizations and agencies generating a rapid and effective collaborative defence structure with the capacity to expand command in order to meet the needs of each incident in real time. The solution respects different geographic and functional authorities enabling each entity, team and individual to share classified and unclassified information while retaining their rights and restrictions at every stage of an event. We look forward to showcase the new innovation for first time in Canada and in premier at CANSEC." says Mrs. Soledad Bourque, President and CEO of IXTROM Group.

PRESS RELEASE

IMMEDIATE RELEASE

Canada's Global Defence & Security Trade Show (CANSEC) has been held annually in Ottawa since 1998 by the Canadian Association of Defence and Security Industries (CADSI). For the 2017 edition, the event will take place from May 31st to June 1st. CANSEC is the largest and most important defence industry event in Canada consisting of more than 800 companies and will once again showcase leading-edge technology, products and services for land-based, naval, aerospace and joint forces military units. Over 11,000 visitors and 65+ foreign delegations are expected ranging from top military officers and government officials to ambassadors and cabinet ministers.

About IXTROM Group

IXTROM Group Inc. (Information Exchange Technology for Risk Operational Management) is a Canadian company specialized in software engineering, the development of collaborative intelligent solutions for decision-making processes, and Command, Control, Computer, Communications, Intelligence, Surveillance and Reconnaissance (C4ISR) systems. We provide solutions that efficiently support Commanders, decision makers, and their staff in every phase of operations.
