

PRESS RELEASE:

IXTROM LAUNCHES IXVMS TRAINING AND SIMULATION SOLUTION TO HELP MILITARY LEADERS MAXIMIZE MISSION SUCCESS BEFORE BOOTS TOUCH THE GROUND.

Magog, Québec (12 February 2019) - IXTROM, a leader in situational awareness and information management systems, has launched **IXVMS (Visualization, Modeling and Simulation Collective Training Management and Awareness System)**, a game-changing, next-generation training and simulation solution that prepares soldiers for the challenges of modern warfare.

IXVMS is the first of an entirely new, next-generation software designed to modernize the training capabilities of our military forces while enabling interoperability with multiple participants across multiple domains, while keeping their rights, roles and authorities, in real time and securely.

IXVMS is a web-based Collaborative Training and Exercise Platform providing an innovative organizational approach to support planners in the design and execution of modeling and simulations. IXVMS provides an intuitive and quick-flowing approach to operational information management and the development of exercise planning and execution in order to develop concepts and training objectives. Objectives are then prioritized with explicit resourcing conditions while participants are given rights and restrictions according to their role and responsibility within the exercise organizational structure. The solution enables various groups and organizations from multiple domains – Land, Maritime, Air, Cyber, Civilians organizations and others – to interoperate and work together, thereby maximizing the likelihood of mission success.

“The next-generation IXTROM’s IXVMS has the interoperability necessary for today’s joint and allied forces tactics and military exercises. This state-of-the-art software solution will help better prepare our soldier to safeguard and strengthen our citizen’s safety and protect the critical infrastructure. IXVMS provides the innovating tools to train, rehearse and improve time to react to threats obtaining mission success,” says Soledad R. Bourque, President of IXTROM Group.

IXVMS is a multifunctional and streamline solution easy and intuitively adaptable to all type of exercises, to create, modify and execute different scenarios from any perspective. Military leaders can analyze every aspect of each scenario in real time to effectively achieve exercise objectives. The training elements can be changed, and new ones added “on the fly” as the simulation unfolds, improves tactical and strategic proficiency and real-time decision-making.

IXVMS is a rapidly deployable system, mobile, and is interoperable with all other agencies and elements, including the vast array of Command, Control, Battle Management, and Communications systems.

The unique capabilities that IXTROM provides make an important addition to the next-generation defense and security architectures around the world.

"We recognize the importance of modernizing the worldwide command and control systems to ensure total soldier capabilities and resiliency. Developing the latest technology to support the worldwide safety and security, fostering the next generation of talent, creating sustainable jobs for a brighter future, and growing the economy are our top priorities," says Soledad R. Bourque, President of IXTROM Group.

IXTROM continues to develop some of the most advanced technologies in the industry right here in Canada, while consistently contributing to our economy and our community.

About IXTROM:

IXTROM specializes in software engineering and the development of intelligent and innovative solutions that provide users with Situational Awareness and Command, Control, Communications and Computer, Intelligence, Surveillance and Reconnaissance capabilities (C4ISR). The Company provides state-of-the-art solutions with a unique framework, enabling seamless interoperability, cross-agency collaboration and enhanced interconnectivity to support rapid, coordinated and safe responses to real-world threats.

IXTROM recognizes that in critical moments, every second count. In order for responders to make the best decisions when it matters, their training environment should reflect the challenges they face in the real world. Real-time, uninterrupted feedback in both training and performance analysis is the greatest predictor of mission success. This understanding has helped IXTROM lay the foundation of a strong company culture and consistently challenge the status quo of traditional market offerings.
